Clients	JR east ANA Prince Hotels		

## Providing Services

We're building last mile transport for tourists, which is 3-seater cute outlook compact EV sharing service from hotels and railway stations. User can unlock the vehicles using app like Lime and if it run out of electricity user can swap the battery in our swapping station. The vchile, its doorless design allow user feel the atmosphere of the place, offering the thrill of cycling/scooter and at the same time car-like maneuverability & multi passenger capacity. Now we're adding the user-assist function so that drivers can know the rule or local custom of the road, and communicate with people around leveraging remote driver assistance technology.

## Project Achievement / Technical Expertise

So far we deployed total 50 vehicles actively operated in our platform generating 25k\$ monthly. Will double in 3 months and triple in 6month, aiming to make it into 1000 in the December of 2025.

Our technology expertise is in putting together the battery swap technology, IoT modules that enables sharing app as well as integrated ECU of the vehicle.

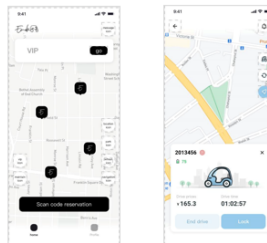

**Unit-economics**

## Battery swap and sharing app

### More Revenue per unit

Longer distance usage. Higher inventory turnover.  
Expand target customer including inbound tourists.

### Lower OPEX.

No more charging and renting operations by hotels.  
No more rescue for the lack of SOC.

### contact person
