## Providing Services

Chodai Co., Ltd. is a consulting firm headquartered in Tokyo, Japan, and the largest company of the PDT group. Chodai was established by 13 bridge engineers in 1968 with the aim of forming a group specialized in long-span bridge design. Chodai has since expanded its business and developed into an overall construction consulting company, and we are today involved in projects ranging from project planning to operation and create new projects by providing high-quality services to society.

(Client: Ministry of Land, Infrastructure, Transport & Tourism)

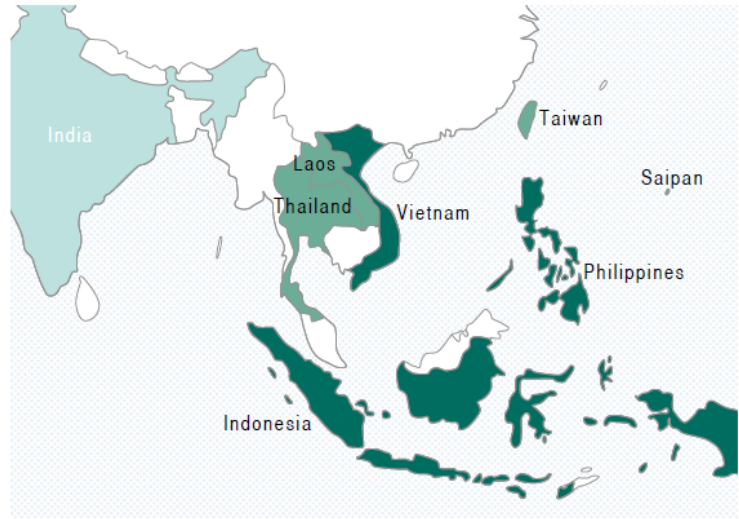

We are active in 13 business fields and have especially high technological expertise in the following 7 fields; Bridge, Road, Railway, Geotechnics, Renewable Energy, Environment and Urban & Regional Development. We use information technology related to these fields to create synergies between the mutual technologies.

## Urban and Regional Development

We have been conducting several regional development projects under a private company-led PPP in the fast-growing Southeast Asian countries, particularly in the Philippines, Vietnam, Indonesia, Laos, Thailand and so on. These long-term projects cover the development of basic infrastructures such as power generation, water supply facilities and waste treatment to road maintenance and port expansions, to develop local industries and generate jobs.

India

Our PPP Projects Sites

## Our Achievements in the Philippines

We have been actively involved in several regional development projects in line with the SDGs of the UN to address environmental, economic, and social challenges in Mindanao Island. Our projects contribute to the local community through the following three stages.

Chodai's Town Planning

## Smart City

## Business Introduction

We provide comprehensive support for sustainable urban development, from the concept stage to operation and management.

Chodai is working on a smart city project to solve local issues and create sustainable towns where residents can continue to live with pride.

In Japan, where the population is declining, the administrative costs are increasing and there is a shortage of financial resources. In addition, productive and attractive jobs are concentrated in urban areas, while population outflow from rural areas is accelerating.

By promoting smart cities using advanced technologies such as AI and IoT and the power of digital technology, we aim to encourage change in rural areas and create towns of the future in three business areas based on the following seven targets.

### CHODAI 7 TARGETS [Chodai's urban development: 7 goals]

sustainability	efficiency	quality of life	economic growth	social inclusion	security	transportation improvement
----------------	------------	-----------------	-----------------	------------------	----------	----------------------------

### CHODAI 3 BUSINESS FIELDS [3 business areas]

#### Consultant • Overall Design

We offer a variety of proposals tailored to local conditions, custom-made basic concepts that take into account the status of existing systems, support for formulating digital promotion plans, creating business plans, and defining requirements for systems and services.

#### System • Service Provider

Based on our extensive track record in multiple cities and towns, we design the entire system to avoid vendor lock-in, and we design and provide services that can be used by many people for many years to come.

#### Maintenance • Operation Business Promotion

Based on our track record of operating urban development rooted in the local community, we will build a maintenance and operation system that creates local jobs, promote business operations, and support the promotion of sustainable digitalization.
